WHAT THE FLINT HILLS PRODUCE.

At the invitation of some of our leading citizens there will be placed on exhibition in the board of trade rooms today (Tuesday), a few specimens of what can be produced from the extensive clay and stone deposits recently discovered on the Gene see ranch, in Greenwood county, owned by Mr. A. S. Mann, of Rochester, N. Y. Thorough tests have been made of the material for different uses, and the practical results obtained will readily suggest to any intelligent mind that resources of great value are only awaiting capital and energy for their development. COUNCIL MEETING.

Jasperite Selected to Pave Douglas Avenu Considerable Routine Business Given Attention.

The council meeting last night called out quite a number of the leading cirlz-ns of the city. The lobby was well filled, the proceedings watched rather closely. The leading feature as shown by marked attention was the paving. It was generally believed the contract for paving Douglas from Wichita to Washington would be awarded. It was known that there was a diversity of opinion among the property owners on the avenue as to the kind of material to be used. There was considerable talk along the speculative line before the matter came up as to what would be done. When the head of unfinished business was called it was not difficult to tell that most of the spectators were interested in the paving matter which came up at that moment. The speeches made for any kind of material from the applause certainly had supporters and when the question was decided for jasperite there was considerable confusion soon followed by many leaving.
